Education

University of North Texas, Master of Computer Science **Texas, USA**

Aug 2023-May 2025

Courses: Software Development for Artificial Intelligence, Software Engineering, Data Visualization, Databases, Cloud Networking, Computer Algorithms

Malla Reddy Engineering College for Women, B. Tech Computer Science **Hyderabad, India**

Jun 2018- May 2022

Summary

Master's graduate in Computer Science with a strong foundation in machine learning, algorithms, and python. Experienced in building data pipelines, evaluating models, and applying ML concepts to real-world projects. Currently leveraging system integration and analytic skills to build lightweight pipelines for data-driven monitoring workflows and seeking to contribute to cutting-edge AI evaluation and simulation within large-scale search and recommendation systems.

Work Experience

Integrated Systems Technician - University of North Texas, Full – Time **Denton, TX**

Aug 2025-Present

- Enhanced **data-driven monitoring workflows** by collecting and analyzing classroom technology performance logs, improving reliability for end-users by 15%.
- Built **lightweight pipelines** to clean and structure datasets (logs, usage records, incident reports), reducing data processing time by 20% and enabling faster reporting.
- Collaborated with senior engineers to **test, debug, and optimize** system configurations, ensuring reproducibility and smooth performance.
- Created clear **documentation** for recurring issues and workflows, helping streamline troubleshooting and support.
- Applied **Python scripting, SQL queries, and automation tools** in day-to-day tasks to support evaluation and monitoring of systems.

Student Technician (Classroom Technologies) — University of North Texas, Part-time **Denton, Texas**

Jan 2024-May 2025

- Owned daily **readiness checks** for A/V systems (projectors, mics, capture devices, PCs); executed standardized test plans so rooms worked before lectures.
- Diagnosed hardware/software faults, performed imaging and driver/firmware updates; captured **logs and repro steps** to hand off to central IT.
- Resolved tickets in the campus ITSM with clear root-cause notes, improving reliability and reducing instructor downtime.

Associate Software Engineer – Accenture, Full Time **Hyderabad, India**

Jun 2022-Jul 2023

- Implemented ITSM workflows and business rules (Incident, Change, Knowledge, Task) with an emphasis on **correctness, validation, and testability**; verified E2E flows before release.
- Built UI policies and portal components with input validation and error handling to reduce bad data and rework.
- Integrated internal/external services via REST to remove manual steps; wrote configuration/runbooks and **sanity checks** to verify successful deployments.
- Partnered with QA/ops to triage defects, reproduce issues, and harden releases; tracked fixes in version control and documented acceptance criteria.

Skills

Languages: Python, JavaScript/TypeScript, Java, C, HTML, CSS
Frameworks/Libraries: React Native, React, Streamlit, scikit-learn, Pandas; PyTorch; Numpy; Hugging Face
Mobile/Web: Expo, React Navigation, DateTimePicker, AsyncStorage
Cloud/DevOps: Git, GitHub, Vercel, Streamlit Cloud
Databases: PostgreSQL, MySQL
AI/LLMs: NLP, Ranking, Relevance, Ollama (Mistral, Gemma), basic embeddings/similarity search, OpenAI, Feature Engineering, Multi-modal Models.

Certifications

- Supervised Machine Learning — Stanford (Andrew Ng)
- Exploratory Data Analysis for ML — IBM (Credential ID: 38HPK970SJYX)
- ServiceNow Certified System Administrator; ServiceNow Certified Application Developer
- Cloud Computing — IBM (Coursera)
- Python Data Structures — Coursera
- Cisco Programming Essentials in C

Projects

RainCastML — Real-Time Rain Predictor | *Python · scikit-learn · Streamlit · OpenWeatherMap API* •
Predicts rain probability from live weather features (humidity, temp, pressure, wind, clouds).

- Engineered a robust feature pipeline with validation and caching for real-time weather data, reducing processing latency by 30%.
- Performed cross validation and deployed a model with 92% predictive accuracy.
- Deployed to Streamlit Cloud with clear UI explanations for inputs, predictions, and confidence.

JobHouse — Job Application Tracker (Cross-Platform) | *React Native · Expo (Web & Mobile) · AsyncStorage · React Navigation*

- Developed a full-stack job tracker application using React Native and Expo. Focused on creating a responsive user interface and robust data handling to manage and update application statuses.
- Context API state and immediate UI updates for **delete** and **clear-all**; **export/share** (JSON/text); motivational quote snippets.
- Web-compatible (Expo Web) and structured for deployment to Vercel/GitHub Pages.

CareerWise — AI Assistant | *Python · Streamlit · Ollama (Mistral/Gemma)*

- **Resume feedback:** structured critiques on clarity, impact metrics, and keyword coverage.
- Implemented a **relevance-based matching algorithm** for resumes and job descriptions, achieving an 85% match accuracy using **rubric-based scoring**. Utilized local inference via Ollama (Mistral/Gemma) to demonstrate proficiency with LLM deployment and a focus on data privacy.
- Modular components to swap models and extend to interview-prep prompts
